

Fall 2010 Earth Science

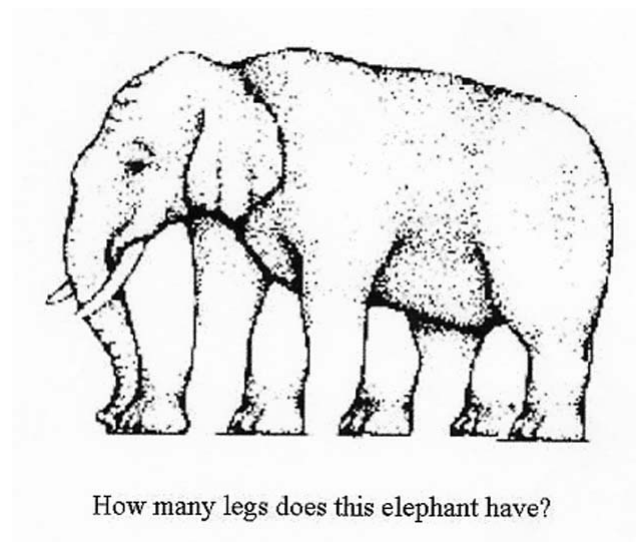

Observations in Science--Illusions

- Our brains tend to love to play tricks on us when the occasion calls for it. So with the right colors, shapes, and patterns sometimes we're tricked into seeing things that we really don't see.

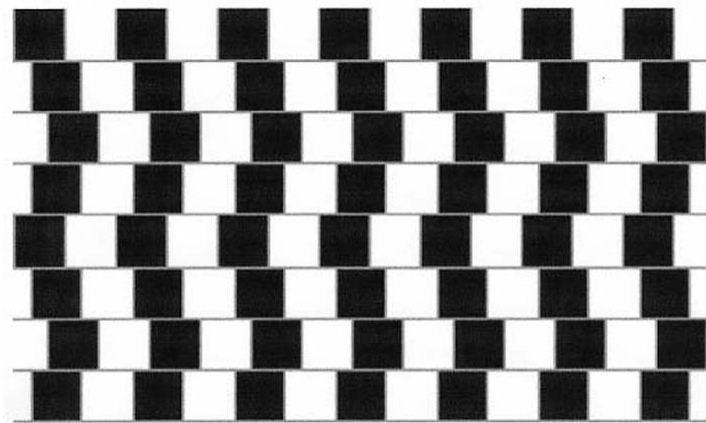

Mars

Elephant Legs

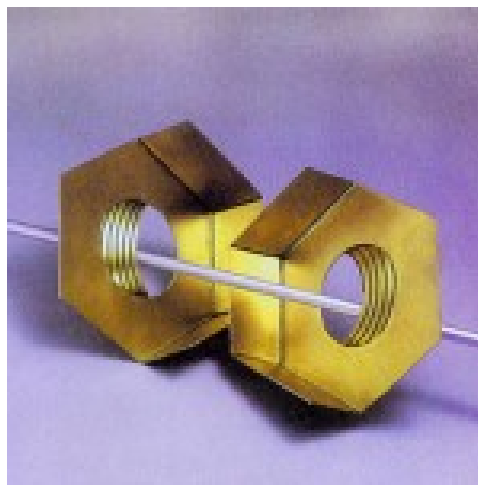

Are the horizontal lines parallel or do they slope?

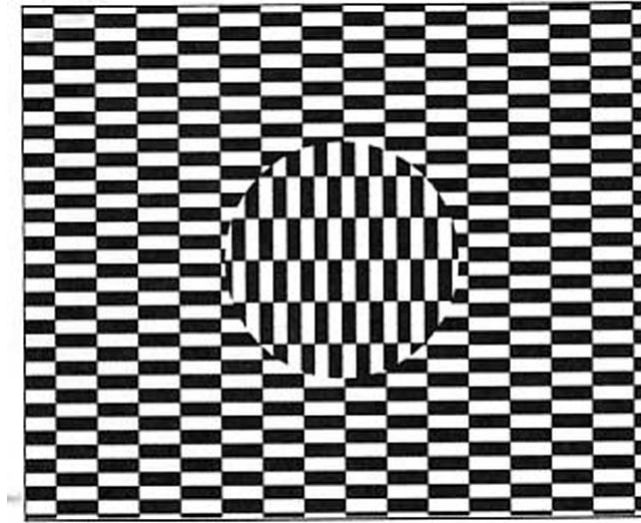

Are the horizontal lines parallel or do they slope?

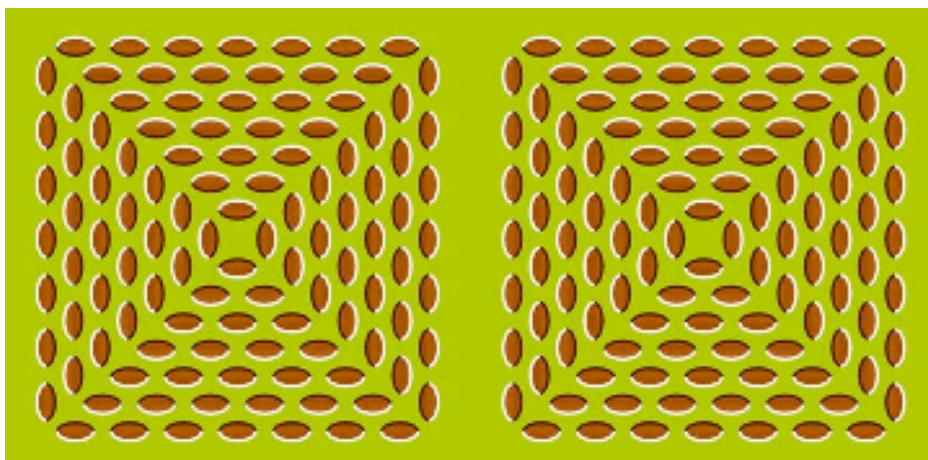

Impossible Nuts

Ouchi Illusion

Pyramids

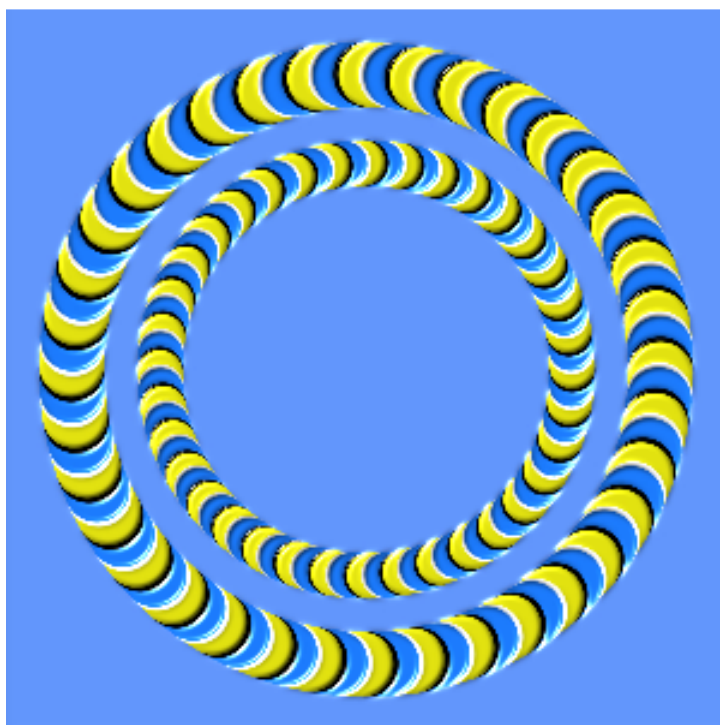

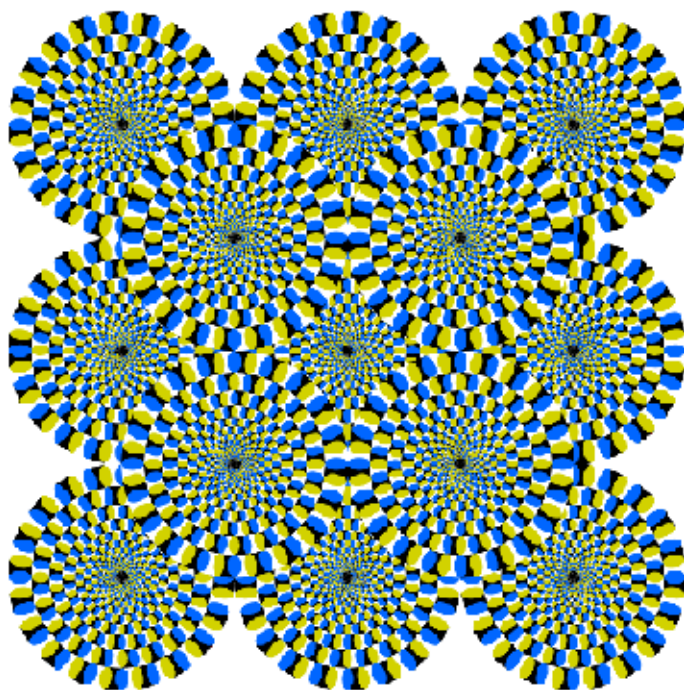

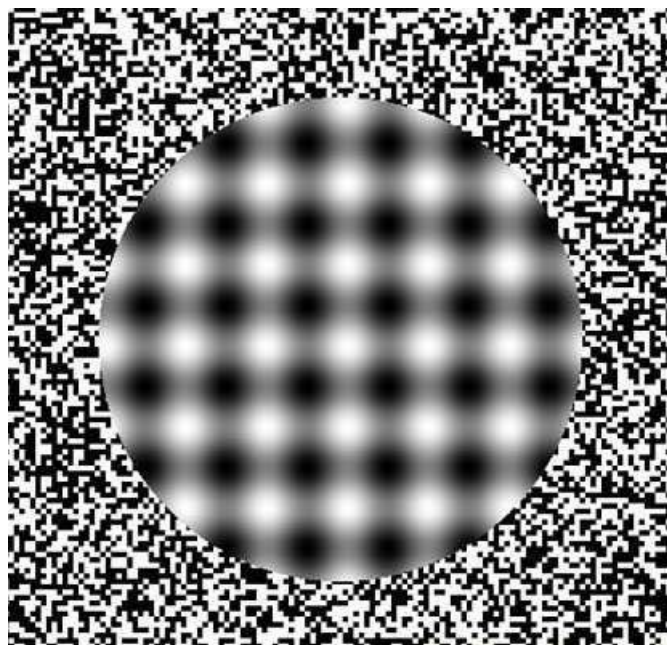

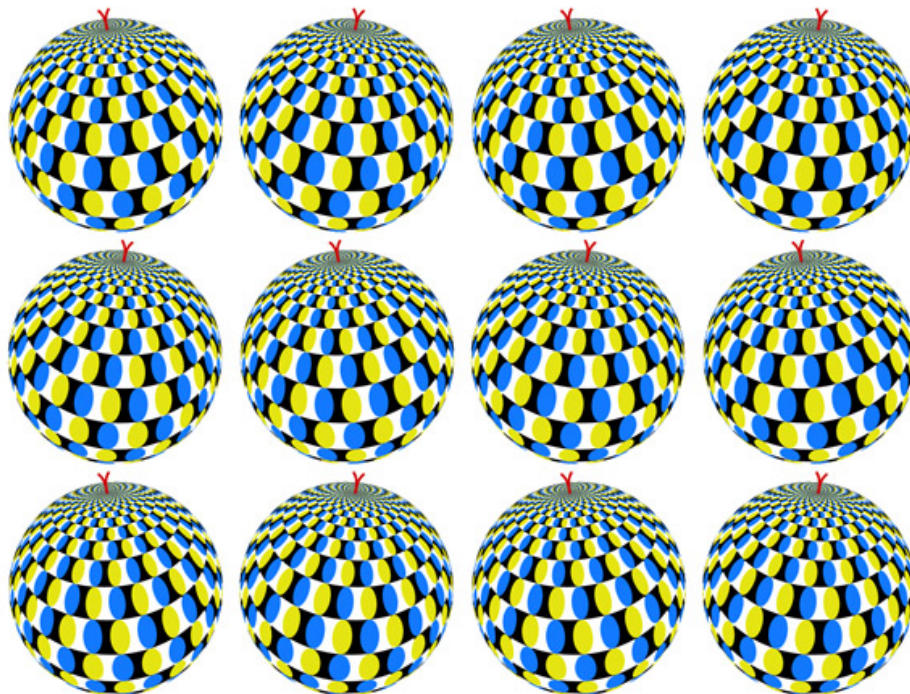

What do you see?

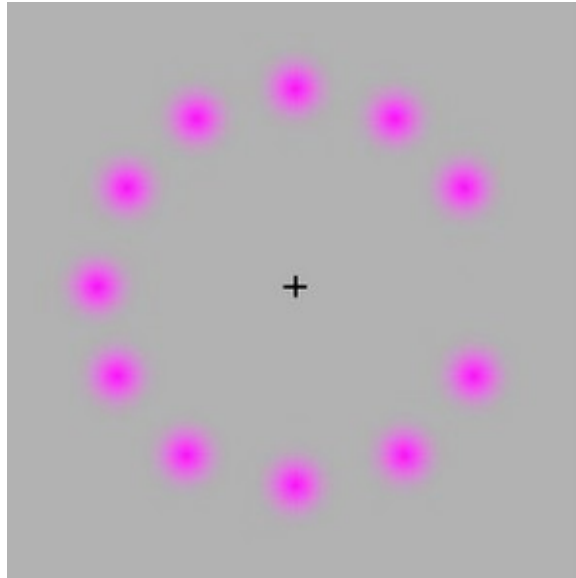

- Man's Face and a word that starts with the letter "L"

Keep your eye on that center and watch
the disappearing act

How about hypnosis
